

Enmotus Signs Distribution Agreement with Ingram Micro

Global IT Distributor to support growth of FuzeDrive™ Software

Aliso Viejo, CA – Oct 27, 2015 – Enmotus Inc., announced today that Ingram Micro Inc. (NYSE: IM) will distribute [Enmotus' FuzeDrive Server](#) software. The distribution agreement targets resellers and system integrators in the United States.

“Ingram Micro has an outstanding track record of introducing innovative technology to companies around the globe. Working with Ingram Micro, the industry’s leading distributor of IT technology, enables Enmotus to expand the reach of our FuzeDrive software into new markets,” said Andy Mills, CEO of Enmotus. “We are excited about the new opportunities created by this agreement, and it is a testament to the value of Enmotus’ virtualization technology.”

FuzeDrive Server virtualizes high-speed solid state storage with large-capacity storage media to create a new class of virtual disks that provide all-flash performance at up to 80% of the cost of an equivalent capacity all-flash solution. Examples of solutions supported by FuzeDrive include hybrid solid state and hard disks, as well as a new innovative class of all-flash hybrids that contain a mix of performance and capacity-oriented solid state storage. Complete data migration automation and real-time operation minimizes management requirements. Pinning capabilities provide additional performance tuning of critical files while visual monitoring tools allow for quick validation of system activity and storage usage.

A 30-day trial version of FuzeDrive Server for Windows and Linux is available on the Enmotus website at www.enmotus.com

###

About Enmotus

Enmotus develops innovative software defined storage acceleration solutions for next generation data center, web scale servers and professional workstation applications. Our intelligent hybrid storage software solution, FuzeDrive, enables system builders and IT managers to easily build vendor agnostic hybrid storage pooled solutions using any standard block storage device, including NVDIMM, PCIe SSD and SAS/SATA storage devices, presenting them as a real-time automated tiered devices within Windows or Linux based operating systems. Fully compatible with all mainstream applications, FuzeDrive implements a rich set of device management tools that allow users to see at a glance data activity, fast tier media or file distribution across tiered devices and manually pin files to any tier.
